

## **New Horizon Technology Hosted PBX**

### **What is VoIP (Voice over Internet Protocol) and why you should subscribe to hosted services?**

#### **Voice and Data Convergence built to suit your business...**

[See a comparative chart of Hosted PBX vs. Premise-Based PBX](#)

VoIP allows you to consolidate your telephone and data service onto a single network, enabling you to leverage your investment in IP across multiple communications streams. Moreover, the flexibility of IP has spawned a multitude of productivity-enhancing voice features and services resulting in increases in employee efficiency and productivity.

#### **Your job gets easier too:**

Hosted Services takes away the worries of obsolescence, maintenance and upgrade of your network equipment such as your PBX or Key System. We do it all in a managed, hosted network environment. Managing moves/adds/changes can be done with the touch of a button. And to top it all off - because you are using your company's broadband connection for calls between your branches and one-hop voice to the Internet for external calls, VoIP will ultimately lower your phone bill.

We have several great ways to leverage your return-on-investment (ROI). For the first time you can fire your long distance company and save 100% with the performance you have always wanted and the [advanced Hosted PBX features](#) your business deserves. We support local number portability, 911/E911 compliance, 411 and Operator Services.

New Horizon Technology Hosted PBX Service delivers immediate and long-term benefits for companies, administrators, end users, and customers.

- Maintain communication even during a disaster or outage with hosted services housed in geographically dispersed data centers.
- Route calls just about anywhere, anytime with complete transparency to the caller.
- Depend on dedicated support 24/7/365.
- Directly manage services via a convenient web portal.
- Offer a single messaging service across all locations.
- Increase efficiency with Unified Messaging which brings email, voice messages and faxes to a single location that can be accessed from anywhere with Internet access.
- Lower capital expenditures by eliminating costly PBX or Key systems.
- Provides consistent & predictable telephone and data access expense that makes budgeting accurate and simple.
- Work from just about anywhere, anytime, while remaining accessible and enjoying the same features and functionality available in the office.

New Horizon Technology Hosted PBX solution is built for Small-Medium Businesses. Our VoIP Network is built on one of the best of class Softswitch technology by the award winning [Broadsoft](#). It is extremely cost-effective and secure, particularly when compared to alternatives such as traditional premise-based TDM/PBX and Centrex services.
